

1) Draw a UML diagram for hotel reservation system. In a hotel reservation system, a customer can make online booking for a hotel, by specifying the accommodation requirements such as type of room (AC/Non-AC, One bed/two bed), total no of rooms, duration of stay. The system selects a suitable hotel as per customer's requirements. If a hotel is found then the availability of rooms in that hotel is checked. The charges are calculated for the selected requirement and these are acknowledged to the customer. If the customer is satisfactory about the selection made by the system, then he confirms the reservation.

AIM:- To design a UML diagram for a **Hotel Reservation System** that models the interactions between different entities such as customers, hotels, and the reservation process. The diagram should clearly represent the workflow of booking a hotel, checking availability, calculating charges, and confirming reservations.

Procedure:-

- 1) Understand the System Requirements.
- 2) Identify Key Entities (Classes) in the System.
- 3) Define Relationships Between Entities.
- 4) Select the Appropriate UML Diagrams to Represent the System.
- 5) Draw the UML Diagrams.
- 6) Label and Verify the UML Diagrams.

DEPLOYMENT DIAGRAM :-

The screenshot shows the Umbrello UML Modeller application with a state machine diagram for a 'Hotel Reservation System'. The diagram is titled 'class diagram' and 'Hotel Reservation System'. It features several states represented by yellow rounded rectangles and transitions represented by arrows. The states and transitions are as follows:

- States:**
 - search for a room
 - check availability
 - book room
 - cancel Reservation
 - edit reservation
 - confirm Reservation
 - date quest and payment informati
- Transitions:**
 - From 'search for a room' to 'check availability'.
 - From 'check availability' to a decision state 'yes'.
 - From 'yes' to 'book room'.
 - From 'book room' to 'edit reservation'.
 - From 'edit reservation' to 'confirm Reservation'.
 - From 'confirm Reservation' to a final state (red circle).
 - From 'cancel Reservation' to a decision state 'choice'.
 - From 'choice' to 'edit reservation' (labeled 'No').
 - From 'choice' to 'date quest and payment informati' (labeled 'Yes').
 - From 'date quest and payment informati' to 'confirm Reservation'.
 - From 'date quest and payment informati' to a final state (red circle).

The interface includes a menu bar (File, Edit, Diagram, Code, Settings, Help), a toolbar with various icons, and a sidebar with 'Documentation' and 'Command history' tabs. The bottom status bar shows 'Ready' and system information like '100% Fz 100%'.

[illegible]

Result : - These diagrams provide a clear and structured representation of the **Hotel Reservation System**, ensuring an efficient and systematic approach to hotel booking.
