

4) Draw a UML diagram for ATM System using CASE tool. The banking system allows a customer to access the financial transactions by ATM System, it has a step-by-step process describe the work of this process and elaborate the what are the work can do by customer, banking system, administrator and technicians with the ATM system.

AIM : - To design a **UML Diagram** for an **ATM System** using a CASE (Computer-Aided Software Engineering) tool. This diagram will illustrate the interactions between different users (customers, banking system, administrators, and technicians) and the ATM system.

Procedure : -

Identify the Key Entities (Actors).

Define the Customer's Actions.

Define the Banking System's Role.

Define the Administrator's Role.

Select the UML Diagrams to Represent the System.

Draw the UML Diagrams Using a CASE Tool.

Label and Verify the UML Diagrams.

ACTIVITY DIAGRAM : -

CLASS DIAGRAM : -

DEPLOYMENT DIAGRAM : -

SEQUENCE DIAGRAM : -

STATE DIAGRAM : -

USE CASE DIAGRAM : -

COMPONENT DIAGRAM :-

ER DIAGRAM :-

RESULT : - The **UML Diagram** for the **ATM System** was successfully designed, demonstrating:

1. **Customer interactions**, including cash withdrawals, balance inquiries, and fund transfers.
2. **Banking System functionalities**, such as authentication, transaction processing, and record updates.
3. **Administrator controls**, including system monitoring and user PIN reset.
4. **Technician responsibilities**, such as ATM maintenance and cash refilling.
