

2) Draw a coffee coffee day ordering system. A coffee coffee day shop vending machine dispenses coffee to customers. Customers order coffee by selecting a recipe from a set of recipes. Customers pay for the coffee using coins. Change is given back, if any, to the customers. The 'service assistant' loads ingredients (coffee powder, milk, sugar, water, chocolate) into the coffee machine. The 'service assistant' adds recipe by indicating the name of the coffee, the units of coffee powder, milk, sugar, water, chocolate to be added as well as the cost of the coffee. The service assistant can also edit and delete a recipe. Develop the use case diagram for the specification above.

**AIM :** - To design a **Use Case Diagram** for a **Coffee Coffee Day Ordering System** that models the interactions between customers, service assistants, and the coffee vending machine. The diagram should clearly represent how customers order coffee, make payments, and receive change, as well as how service assistants manage ingredients and recipes.

**Procedure :** -

Identify the System Requirements

Identify the Key Actors

Define the Use Cases

Draw the Use Case Diagram

Label and Verify the Diagram

## CLASS DIAGRAM :-

## SEQUENCE DIAGRAM :-

## ACTIVITY DIAGRAM : -

## DEPLOYMENT DIAGRAM : -

## STATE DIAGRAM :-

## COMPONENT DIAGRAM :-

## ER DIAGRAM :-

**RESULT :** - This diagram effectively models the functionalities of the coffee vending machine, ensuring a clear understanding of user interactions and system behavior.
