

6) Draw a Use case diagram to model for a quiz system. A user can request a quiz for the system. The system picks a set of questions from its database, and composes them together to make a quiz. It rates the user's answers and gives hints if the user requests it. In addition to users, we also have helpers who provide questions and hints. And also, administrators who must certify questions to make sure they are not too trivial, and that they are correct.

AIM : - To design a **Use Case Diagram** for a **Quiz System** that models the interactions between different users (quiz takers, helpers, and administrators) and the system. The diagram will illustrate how quizzes are created, answered, and managed.

Procedure :-

Identify the Key Actors.

Define the Use Cases for Each Actor.

Draw the Use Case Diagram.

Label and Verify the Diagram.

USE CASE DIAGRAM:-

RESULTS:- The **Use Case Diagram** for the **Quiz System** was successfully designed, illustrating:

1. **User interactions**, such as requesting a quiz, answering questions, and asking for hints.
2. **Helper functionalities**, including adding questions and providing hints.
3. **Administrator responsibilities**, such as certifying questions.
4. **System processes**, such as selecting quiz questions, rating answers, and delivering hints.
