

9)A college has more than thousand security persons, who are instructed to give duties at different places within the campus. Additionally, they also maintain a routine, which contains all information, such as Date, Duty Start Time, Duty End Time, and Place. Most importantly, all the places are covered by at least one security person. If a security person takes leave, manual entry is done against that person. Finally, at the end of a month, the security persons get paid for their duties, while considering the number of leaves as well. You can see that the manual calculation/operation is a heavy task for the security manager. Therefore, the objective is to build an Online security management system using class diagram through which entire security system within the campus can be controlled in an efficient manner.

AIM :- To design a **Class Diagram** for an **Online Security Management System** that efficiently manages security personnel, their duty schedules, leave records, and payroll calculations within a college campus.

PROCEDURE : -

Identify the Key Entities (Classes).

Define the Relationships Between Classes.

Design the Class Diagram with Attributes and Methods.

Validate the Class Diagram.

CLASS DIAGRAM :-

USE CASE :-

RESULT : - The **Class Diagram** for the **Online Security Management System** was successfully designed, illustrating:

1. **Efficient scheduling and duty assignment** for security personnel.
2. **Automated leave tracking** to update duty rosters in real-time.
3. **Automated payroll processing** based on assigned duties and leaves taken.
4. **Streamlined operations** for the security manager, reducing manual work.
